

*Building better forecasts  
through community partnerships*

## **July 27-29 2020: First Annual UFS Users' Workshop** ***NCAR Center Green Campus, Boulder, CO***

The Unified Forecast System (UFS; [ufscommunity.org](https://ufscommunity.org)) Users' Workshop will be a science-focused annual forum that provides an opportunity for people from across the Weather Enterprise to share research and contribute to future development of the UFS. The attendees are encouraged to showcase experiences related to a broad range of topics (model development, model dynamics/physics, data assimilation/ensemble, post processing, verification/evaluation, coupling, regional modeling, weather extremes, etc.). It is expected to improve communications, transparency, and mutual trust between operational centers and the broader community.
